

# FEDERAL PUBLIC SERVICE COMMISSION COMPETITIVE EXAMINATION-2021 FOR RECRUITMENT TO

POSTS IN BS-17 UNDER THE FEDERAL GOVERNMENT

## **CHEMISTRY, PAPER-II**

Roll Number

TIME ALLOWED: THREE HOURS **PART-I(MCQS): MAXIMUM 30 MINUTES PART-II** 

PART-I (MCQS)

MAXIMUM MARKS = 20**MAXIMUM MARKS = 80** 

Part-II is to be attempted on the separate Answer Book.

- (ii) Attempt ONLY FOUR questions from PART-II. ALL questions carry EQUAL marks.
- (iii) All the parts (if any) of each Question must be attempted at one place instead of at different places.
- (iv) Candidate must write Q. No. in the Answer Book in accordance with Q. No. in the Q.Paper.
- (v) No Page/Space be left blank between the answers. All the blank pages of Answer Book must be crossed.
- (vi) Extra attempt of any question or any part of the attempted question will not be considered.

### **PART-II**

- O. 2. (a) Describe factors that influence keto-enol tautomerization. Elaborate the statement with the (10)help of examples.
  - (b) Assign "R" or "S" configuration on each of the chiral centers of the given compounds. (10)(20)

- O. 3. (a) Give the products expected (if any) when ethylbenzene reacts under following conditions:
  - Br<sub>2</sub> in CCl<sub>4</sub> (dark) (i)

(02 marks each) (10)

- HNO<sub>3</sub>,H<sub>2</sub>SO<sub>4</sub> (ii)
- (iii) Conc. H<sub>2</sub>SO<sub>4</sub>

(iv) 
$$C_2H_5$$
  $C_1$ , AlCl<sub>3</sub>(1.1 equiv.), then  $H_2O$ 

- Alkaline KMnO<sub>4</sub> (v)
- **(b)** Account for the following:

(05 marks each) (10)(20)

- Intramolecular H-bonding is stronger than intermolecular H-bonding
- Control of nucleophilic substitution reaction over elimination reactions (ii)
- Q. 4. (a) Write down reagents, reaction conditions and important steps for the following (10) conversions:
  - Chlorobenzene to 2,4-dinitrophenyl hydrazine (i)
  - (ii) Pyridine to 2-amino pyridine
  - Write a note that substituents on aromatic rings dictate reactivity and orientation of the (10) (20) incoming electrophile in electrophilic aromatic substitution reactions.
- Draw detailed mechanisms for: Q. 5.

(04 marks each) (20)

## **CHEMISTRY, PAPER-II**

$$(iv) \qquad \qquad \underbrace{ \begin{array}{c} \text{i- SOCI}_2, \text{ CH}_2\text{N}_2\\ \text{ii- AgO, CH}_3\text{OH} \\ \end{array} }_{\text{O}} \qquad \underbrace{ \begin{array}{c} \text{CH}_3\\ \text{O}\\ \text{O}\\ \text{OCH}_3 \\ \end{array} }_{\text{O}} \qquad \underbrace{ \begin{array}{c} \text{CH}_3\\ \text{O}\\ \text{O}\\ \text{OCH}_3 \\ \end{array} }_{\text{O}} \qquad \underbrace{ \begin{array}{c} \text{CH}_3\\ \text{O}\\ \text$$

### **Q. 6.** Account for the following:

(05 marks each)

(20)

ninantly at the 7 and 3

(i) In DNA, a guanine residue reacts with electrophiles predominantly at the 7 and 3 positions of the ring system (see below). Suggest an explanation for this.

(ii) Outline the synthesis of following compound:

(iii) A Grignard reagent that is a key intermediate in an industrial synthesis of vitamin A can be synthesized in the following way:

of compounds A and C? The acid catalysed rearrangement of A to B takes p1.

(iv) What are compounds  $\bf A$  and  $\bf B$  in the reaction given below? Compound  $\bf B$  has a strong IR absorption band in the  $1650-1730~\rm cm^{-1}$  region and a broad strong band in the  $3200-3550~\rm cm^{-1}$  region.

1-Methylcyclohexene 
$$\frac{1. \text{ OsO}_4}{2. \text{ NaHSO}_3}$$
 A (C<sub>7</sub>H<sub>14</sub>O<sub>2</sub>)  $\frac{\text{CrO}_3}{\text{CH}_3\text{CO}_2\text{H}}$  B (C<sub>7</sub>H<sub>12</sub>O<sub>2</sub>)

## **Q. 7.** Explain the following:

(04 marks each) (20)

- (i) How can IR be used to help interpret NMR spectra?
- (ii) What are diastereotopic protons? Explain with examples.
- (iii) Determine the structure for a compound with formula  $C_6H_4N_2O_4$  with following  $^1H\text{-NMR}$  data:

 $\delta$  8.76 t (1H), 8.38 dd (2H), 7.97 t (1H)

- (iv) Assign chemical shifts of each proton in the above structure.
- (v) Why <sup>13</sup>C-NMR is less sensitive than <sup>1</sup>H-NMR?

### **Q. 8.** Answer following questions:

(04 marks each) (20)

- (i) Comment if glycogenesis is anabolic or catabolic. Write down all steps involve in glycogenesis.
- (ii) Describe endergonic and exergonic reactions
- (iii) Write a note on anionic and cationic surfactants.
- (iv) Comment if waste glass can be used for cement production.
- (v) What is the chemical composition of nucleic acids and their biological significance?
